

Colour Quality Management Policy

The Company ensures that the colour quality policy represents the quality policy as far as the colour quality system is concerned.

The company is using the BPIF ISO 12647 Colour Quality Management Certification scheme V3 November 2017 where applicable.

The Company is using the ISO standard 12647-2 for the lithographic printing process as the method of production within the scope of the certification. The 12647-2 procedures are used to demonstrate compliance.

The Company is using the percentage scoring systems weightings and the scoring system calculation as required by version 3 of the BPIF scheme.

Our aim is to ensure customer satisfaction through accurate colour reproduction and consistent quality against calibrated proofs for all jobs produced to the ISO 12647 -2 standard.

The Company ensures the training, development and maintenance of the competence of all personnel within the scope of the colour quality and the production management system.

The Company ensures the provision of the necessary infrastructure and equipment needed for the production of compliant products.

The Company undertakes reviews on a regular basis of the capabilities of the infrastructure and equipment employed in the light of technological and other changes as they become available.

The Company ensures the policy detailed above is communicated within the business and made available to all interested parties.
